

Deployment Requirements Template Description

This deliverable defines a deployment requirement at the business capability level. Typically there is one document completed for each deployment requirement.

The following points should define the focus of this deliverable:

- What are the reasons for the currently proposed release approach?
- What are the resource constraints?
- What are the timing constraints?
- What is the focus of performance improvement captured in the Business Performance Model?
- What are the Business Requirements that the sponsoring organization considers important?
- What are the important Business Requirements which are affected by the deployment requirements?
- Which deployment requirements will require mitigation approaches to be defined?
- What deployment experiences and best practices have been collected from this project or similar projects?
- What are the sites, or sets of sites, of the sponsoring organization that the business capability will affect most?
- Which deployment units, or sites within units, need to be considered for piloting?
- What is the lever of change of the human, process, technology, or physical infrastructure elements (or combinations thereof)?

The **General** area of the sample shows configuration management and audit trail information concerning this document. The **Summary** area of the sample supplies the name, a short paragraph, and a list of keywords that describe the content of this document.

Area - The deployment area which the requirement covers. Typical values are Application, Business Policy, Physical Environment, Technology Infrastructure, and Work Force.

Priority - The deployment requirement's relative priority, usually expressed in terms of High, Medium, or Low.

Milestone Date - The date by which something takes place.

Milestone Type - The status of the milestone. Typical values are Completed, Ordered, Installed, and Communicated.
