

LMS Testing & Pilot
March 8, 2002

The LMS Testing & Pilot deliverable describes the approach that was used to execute testing of the learning management system. Testing focused on validating the successful integration of Saba onto the Jamcracker Platform, as well as the functional configuration and business capabilities of Saba. Testing also concentrated on ensuring that operational and performance support procedures are established and that the solution can be effectively deployed to SFA University employees.

The LMS Testing & Pilot deliverable contains test plans and test scripts. Each test plan provides the objectives, scope, and systematic approach that were used to execute each test phase. Additional detail is provided in the accompanying test scripts.
