The Technology Infrastructure Blueprint - Now Available

The Business-Technology Alignment team, under the FSA CIO IT Management department, has just released the latest version of the FSA Technology Infrastructure Blueprint (TIB). The TIB provides the details of FSA's production architecture, which is the collection of FSA system applications. The TIB describes each system application, details of the technologies used to execute the application, the system interfaces used to exchange data, the programming languages employed, and points of contact for the system application. This information serves to guide FSA toward a consistent technology infrastructure based on FSA standards supporting the modernization vision. The TIB is available as either a Microsoft Word document or as a web-based resource, which can be found on the FSA CIO intranet (http://fsanet/cio/technology_handbook) and extranet home page. Please contact Karen Anderson (202-962-0755), Denise Hill (202-377-3030) or anyone on the IT Management staff, if you have any questions or suggestions for the Technology Blueprint.
